Report No.: RXM160509052-00

#### GENERAL INFORMATION

#### **Product Description for Equipment under Test (EUT)**

The *QUANZHOU CITY NEW CENTURY COMMUNICATION ELECTRONICS CO., LTD.* 's product, model: *DM-8500 (FCC ID: VO6DM-8500)* (the "EUT") in this report is a *DMR TWO WAY RADIO*, which was measured approximately: 12.5 cm (L) x 6 cm (W) x 3.6 cm (H), rated input voltage: DC7.4V from battery and DC 12 V from adapter.

Report No.: RXM160509052-00

Adapter information: MODEL:ACIP60DC

INPUT: AC100-250V /50Hz OUTPUT: DC12V ,800mA

Note: The series product, models DM-8500, DM-8600, DM-8566, DM-8562, DM-8666, DM-8662, DM-8670 are electrically identical, the differences between them are model names, we selected DM-8500 for fully testing, the details was explained in the declaration letter.

\* All measurement and test data in this report was gathered from production sample serial number: 160509052. (Assigned by BACL.Xiamen). The EUT was received on 2016-05-10.

#### **Objective**

This test report is prepared on behalf of *QUANZHOU CITY NEW CENTURY COMMUNICATION ELECTRONICS CO., LTD.* in accordance with Part 2, Part 90 of the Federal Communications Commission rules.

#### **Related Submittal(s)/Grant(s)**

No related submittal(s).

#### **Test Methodology**

All tests and measurements indicated in this document were performed in accordance with the Code of federal Regulations Title 47 Part 2, Sub-part J as well as the following individual parts:

Part 90 – Private Land DMR TWO WAY RADIO Service

Applicable Standards: TIA-603-D.

All emissions measurement was performed and Bay Area Compliant Laboratories Corp. (Dongguan). The radiated testing was performed at an antenna-to-EUT distance of 3 meters.

FCC Part 90 Page 4 of 34

#### **Test Facility**

The Test site used by Bay Area Compliant Laboratories Corp. (Dongguan) to collect test data is located on the No.69 Pulongcun, Puxinhu Industrial Zone, Tangxia, Dongguan, Guangdong, China

Report No.: RXM160509052-00

Test site at Bay Area Compliant Laboratories Corp. (Dongguan) has been fully described in reports submitted to the Federal Communication Commission (FCC). The details of these reports have been found to be in Compliant with the requirements of Section 2.948 of the FCC Rules on February 06, 2015.

The Federal Communications Commission has the reports on file and is listed under FCC Registration No.: 273710. The test site has been approved by the FCC for public use and is listed in the FCC Public Access Link (PAL) database.

FCC Part 90 Page 5 of 34

### SYSTEM TEST CONFIGURATION

#### **Description of Test Configuration**

The system was configured for testing in a test mode.

#### **EUT Specification:**

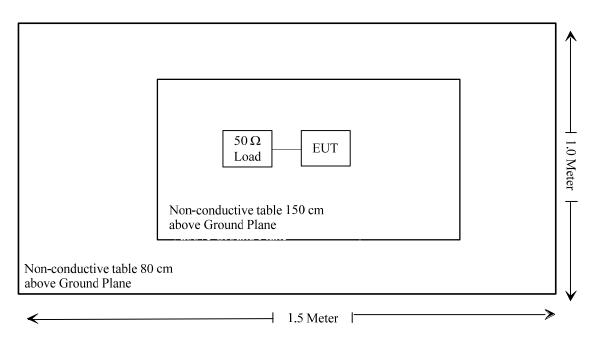

| Frequency Band  | 400-480MHz        |
|-----------------|-------------------|
| Modulation Mode | FM/4FSK           |
| Channel Spacing | 12.5kHz           |
| Output Power    | High: 5W, Low: 1W |

Report No.: RXM160509052-00

#### **Support Equipment List and Details**

| Manufacturer | Description                   | Model | Serial Number |
|--------------|-------------------------------|-------|---------------|
| /            | 50 Load Teminal               | 100W  | /             |
| НР           | RF Communications Test<br>Set | 8920A | 00 235        |

### SUMMARY OF TEST RESULTS

| FCC Rules                      | Description of Test                   | Results   |
|--------------------------------|---------------------------------------|-----------|
| FCC§1.1310 & §2.1093           | RF exposure                           | Compliant |
| §2.1046;§90.205                | RF Output Power                       | Compliant |
| §2.1047;§90.207                | Modulation Characteristic             | Compliant |
| \$2.1049;\$90.209;<br>\$90.210 | Occupied Bandwidth & Emission Mask    | Compliant |
| §2.1051;§90.210                | Spurious Emission at Antenna Terminal | Compliant |
| §2.1053;§90.210                | Spurious Radiated Emissions           | Compliant |
| §2.1055; §90.213               | Frequency Stability                   | Compliant |
| §90.214                        | Transient Frequency Behavior          | Compliant |

Report No.: RXM160509052-00

FCC Part 90 Page 7 of 34

### FCC §1.1310 & §2.1093 - RF EXPOSURE

Report No.: RXM160509052-00

#### **Applicable Standard**

FCC§1.1310 and §2.1093.

#### **Test Result**

Compliant, please refer to the SAR report: RXM160509052-20

FCC Part 90 Page 8 of 34

#### FCC §2.1046 & §90.205- RF OUTPUT POWER

#### **Applicable Standard**

FCC §2.1046 and §90.205.

#### **Test Procedure**

Conducted RF Output Power:

TIA-603-D section 2.2.1

The RF output of the transmitter was connected to the input of the spectrum analyzer through sufficient attenuation.

Report No.: RXM160509052-00

Spectrum Analyzer setting:

| RBW     | VBW     |
|---------|---------|
| 100 kHz | 300 kHz |

#### **Test Equipment List and Details**

|            |            | 479.9875                  | 5.02   | 1.05 | /                  |

Report No.: RXM160509052-00

Note: The rated power is 5W for high power level, 1W for low Power level.

FCC Part 90 Page 10 of 34

#### FCC §2.1047 & §90.207 - MODULATION CHARACTERISTIC

#### **Applicable Standard**

FCC§2.1047 & §90.207:

(a) Equipment which utilizes voice modulated communication shall show the frequency response of the audio modulating circuit over a range of 100 to 5000 Hz. for equipment which is required to have a low pass filter, the frequency response of the filter, or all of the circuitry installed between the modulation limited and the modulated stage shall be supplied.

Report No.: RXM160509052-00

(b) Equipment which employs modulation limiting, a curve showing the percentage of modulation versus the modulation input voltage shall be supplied.

#### **Test Procedure**

Test Method: TIA/EIA-603D 2.2.3

#### **Test Equipment List and Details**

| Manufacturer   | Description                   | Model           | Serial Number | Calibration<br>Date | Calibration<br>Due Date |

| 5850-5925            |   |  |
| All other bands      | В   | С  |

**Emission Mask D**—12.5 kHz channel bandwidth equipment. For transmitters designed to operate with a 12.5 kHz channel bandwidth, any emission must be attenuated below the power (P) of the highest emission contained within the authorized bandwidth as follows:

- (1) On any frequency from the center of the authorized bandwidth f0 to 5.625 kHz removed from f0: Zero dB.
- (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (fd in kHz) of more than 5.625 kHz but no more than 12.5 kHz: At least 7.27(fd-2.88 kHz) dB.
- (3) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (fd in kHz) of more than 12.5 kHz: At least  $50 + 10 \log (P) \, dB$  or  $70 \, dB$ , whichever is the lesser attenuation.
- (4) The reference level for showing Compliant with the emission mask shall be established using a resolution bandwidth sufficiently wide (usually two or three times the channel bandwidth) to capture the true peak emission of the equipment under test. In order to show Compliant with the emission mask up to and including 50 kHz removed from the edge of the authorized bandwidth, adjust the resolution bandwidth to 100 Hz with the measuring instrument in a peak hold mode. A sufficient number of sweeps must be measured to insure that the emission profile is developed. If video filtering is used, its bandwidth must not be less than the instrument resolution bandwidth. For emissions beyond 50 kHz from the edge of the authorized bandwidth, see paragraph (o) of this section. If it can be shown that use of the above instrumentation settings do not accurately represent the true interference potential of the equipment under test, an alternate procedure may be used provided prior Commission approval is obtained.

<sup>\*</sup> Statement of Traceability: Bay Area Compliance Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

#### **Test Procedure**

Adjust the spectrum analyzer for the following settings:

- 1) Resolution Bandwidth = 100 kHz for spurious emissions below 1 GHz, and 1 MHz for spurious emissions above 1 GHz.
- 2) Video Bandwidth  $\geq 3$  times the resolution bandwidth.
- 3) Sweep Speed  $\leq 2000$  Hz per second.
- 4) Detector Mode = mean or average power.

<sup>\*</sup> Statement of Traceability: Bay Area Compliant Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

#### **Test Procedure**

The transmitter was placed on a wooden turntable, and it was transmitting into a non-radiating load, which was also placed on the turntable.

The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The test was performed by placing the EUT on 3-orthogonal axis.

The frequency range up to tenth harmonic of the fundamental frequency was investigated.

Remove the EUT and replace it with substitution antenna. A signal generator was connected to the substitution antenna by a non-radiating cable. The absolute levels of the spurious emissions were measured by the substitution.

For part 90:

Spurious emissions in dB =  $10 \log_{10}$  (TXpwr in Watts/0.001)-the absolute level

FCC Part 90 Page 27 of 34

Spurious attenuation limit in  $dB = 50+10 \ Log_{10}$  (power out in Watts) for EUT with a 12.5 kHz channel bandwidth.

Report No.: RXM160509052-00

#### **Test Data**

#### **Environmental Conditions**

| Temperature:       | 26.3°C   |
|--------------------|----------|
| Relative Humidity: | 74 %     |
| ATM Pressure:      | 100.4kPa |

The testing was performed by Dean Liu on 2016-05-24.

Test Mode: Transmitting-High power level is the worst case.

Report No.: RXM160509052-00

Note1: For radiated spurious emissions were tested at high rated power, which was the worst case. Note2: The unit of Antenna Gain is dBd for frequency below 1GHz, and the unit of Antenna Gain is dBi for frequency above 1GHz.

Note3: Absolute Level = SG Level - Cable loss + Antenna Gain Margin = Limit-Absolute Level

Report No.: RXM160509052-00

#### **Test Procedure**

Frequency Stability vs. Temperature: The equipment under test was connected to DC power supply and the RF output was connected to a frequency counter via feed-through attenuators. The EUT was placed inside the temperature chamber. The power leads and RF output cable exited the chamber through an opening made for the purpose.

After the temperature stabilized for approximately 20 minutes, the frequency output was recorded from the counter.

The frequency stability shall be measured with variation of primary supply voltage as follows:

(1) For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point which shall be specified by the manufacturer.

#### **Test Data**

#### **Environmental Conditions**

| Temperature:       | 28.7°C   |  |
|--------------------|----------|--|
| Relative Humidity: | 52 %     |  |
| ATM Pressure:      | 100.6kPa |  |

The testing was performed by Dean Liu on 2016-05-13.

Report No.: RXM160509052-00

#### **Test Procedure**

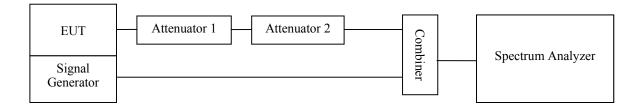

- a) Connect the EUT and test equipment as shown on the following block diagram.
- b) Set the Spectrum Analyzer to measure FM deviation, and tune the RF frequency to the transmitter assigned frequency.
- c) Set the signal generator to the assigned transmitter frequency and modulate it with a 1 kHz tone at  $\pm 12.5$  kHz deviation and set its output level to -100dBm.
- d) Turn on the transmitter.
- e) Supply sufficient attenuation via the RF attenuator to provide an input level to the Spectrum Analyzer that is 40 dB below the maximum allowed input power when the transmitter is operating at its rated power level. Note this power level on the Spectrum Analyzer as P<sub>0</sub>.
- f) Turn off the transmitter.
- g) Adjust the RF level of the signal generator to provide RF power equal to P<sub>0</sub>. This signal generator RF level shall be maintained throughout the rest of the measurement.
- h) Remove the attenuation 1, so the input power to the Spectrum Analyzer is increased by 30 dB when the transmitter is turned on.
- i) Adjust the vertical amplitude control of the spectrum analyzer to display the 1000 Hz at  $\pm 4$  divisions vertically centered on the display. Set trigger mode of the Spectrum Analyzer to "Video", and tune the "trigger level" on suitable level. Then set the "tiger offset" to -10ms for turn on and -15ms for turn off.
- j) Turn on the transmitter and the transient wave will be captured on the screen of Spectrum Analyzer. Observe the stored display. The instant when the 1 kHz test signal is completely suppressed is considered to be  $t_{on}$ . The trace should be maintained within the allowed divisions during the period  $t_1$  and  $t_2$ .

FCC Part 90 Page 32 of 34

<sup>\*</sup> Statement of Traceability: Bay Area Compliant Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

k) Then turn off the transmitter, and another transient wave will be captured on the screen of Spectrum Analyzer. The trace should be maintained within the allowed divisions during the period t<sub>3</sub>.

Report No.: RXM160509052-00
